

10/031536

1/22

1. Peptides growth factors are absorbed by foliage and are accessible to cut tissue opening.
2. Microflora, complexity on foliage is increased to provide an antagonistic bio film to limit fungal spread.
3. Peptides, carbohydrates, growth factors are adsorbed to sub soil particles and increase the soil cation exchange capacity.
4. Carbonates and peptides provide nutrients for multi placations/ vitality of the microflora
5. Microflora develops soil suppressive character by natural means.
6. Immuno-stimulants including glucans attach to the root system and trigger immuno responsive cascade in the plants
7. Peptides and polysaccharides provide constant slow release of amino acids and sugars for plant root and microbial nutrition.
